

Untreated Creeping Bentgrass

Treated with TGR Turf Enhancer

**Want proof of the effectiveness of  
SCOTT'S TGR Turf Enhancer 50 WP?**

SCOTT'S TGR Turf Enhancer 50 WP not only improves the color, density and playability of turf. It also reduces clippings (by up to 50%). TGR Turf Enhancer controls turf growth for tees, fairways and greens, encouraging tightly knit turf stand. As turf growth slows, clippings are reduced and water conserved -- offering important economic and environmental advantages with regards to clipping disposal and water management.

When used with nitrogen fertilizers, TGR Turf Enhancer stimulates turf growing for up to 12 weeks. And it is especially effective on perennial ryegrass turf. Because Scott has been working with TGR technology for more than 30 years, our Tech Reps offer unsurpassed experience in managing growth regulator applications. Why settle for anything less?

Your Scott Tech Rep is ready to show you how TGR Turf Enhancer can improve the playability of your golf course as part of a total turfgrass program. For more information, contact him today. Or call 1-800-543-0006.
